# Automechanika Frankfurt 2024

JBM presents its latest innovations at the leading trade fair

Automechanika Frankfurt is the world's leading event in the automotive sector, bringing together major manufacturers, distributors and professionals every two years.

The fair is not only a platform for product presentations, but also a place where strategic alliances are forged and trends that will define the future of the industry are explored. This year, from 10 to 14 September, Automechanika was attended by thousands of exhibitors and visitors from all over the world, consolidating once again as an essential event for the sector.

JBM, a leading company in the distribution of tools, is proud to have participated, showing our latest news and flagship products on a stand that did not go unnoticed. With more than 30 years of experience, JBM continues to focus on providing quality products that facilitate work and improve both productivity and safety.

## News and future bets

At this edition of Automechanika, JBM also took the opportunity to present some of our latest innovations. These innovations not only respond to current market needs, but also anticipate future trends by offering our customers tools that combine advanced technology, durability and ease of use.

One of the main focuses was our electric range, which continues to grow. Introducing the new 60050 and 60051 impact guns, designed for maximum performance and efficiency which characterise JBM.

Another great attraction was our workshop furniture, known for its robustness, ergonomic design and versatility. At the fair, we exhibited the 54327, a set of modular furniture for workshop 18 pieces, the 54518, a modular trolley, among others. We have a wide range of options to optimize the workspace, allowing professionals to have a more organized and efficient work environment. Our furniture is not only functional, but also designed to last and withstand intensive daily use.

The direct contact with our customers and partners during the fair was invaluable. It allowed us not only to receive direct feedback on our products, but also to strengthen business relationships that are already fundamental pillars for JBM's growth. This edition of Automechanika left us with a very positive feeling and the certainty that we are on the right path to continue leading the sector.

For those of you who were unable to visit us in Frankfurt, don't worry. All our news and products are available through our official channels. JBM will continue to work with the same commitment and dedication to provide the best solutions for automotive professionals, with the quality and service that has always characterized us.

## UPCOMING TRADE FAIRS

## JBM AS OFFICIAL SPONSOR OF TCMOTORSPORTS

### ELECTRIC MOTOR

Advanced electric propulsion technology, which ensures efficiency and power on the track.

### INNOVATION IN BRAKES

Regenerative braking system that improves efficiency.

### ADJUSTABLE SUSPENSION

Developed to suit various race conditions.

*VoltCat-24*

## TCMotorsports presents VoltCat-24

The car designed by the students of Tecnocampus

JBM continues to demonstrate its commitment to education and the advancement of the sector, actively supporting the TCMotorsports team at Tecnocampus. This collaboration drives the development of electric racing cars, Formula Student, a project where students apply their knowledge and experiment with the most advanced tools in the industry. This year the team has presented the single-seater, VoltCat-24.

TCMotorsports, is the official Tecnocampus racing team, is a group of students passionate about engineering and motor sport. Its mission is to design, build and compete with state-of-the-

art electric cars. This initiative enables students to learn and apply technical knowledge in a real competition environment.

The team competes in Formula Student, an international university-based motor racing competition where teams design and build their own cars. Vehicles are evaluated for both technical design and track performance, with tests ranging from acceleration to endurance. It is a key platform for fostering innovation and practical experience of future engineers.

Although the VoltCat-24 has not achieved victory in its debut, the team has shown a remarkable effort in developing its first electric single-seater. The support of JBM as official sponsor has been fundamental to advance this educational and technological project.

54581

## SEMI-AUTOMATIC TIRE CHANGER

Efficiency, precision and speed

This machine is designed to optimize tyre dismantling, offering a perfect combination of precision and efficiency.

Thanks to its oscillating arm, it allows precise control during the handling of the wheels. In addition, its de-tuner grapple facilitates the dismantling of even the most difficult tyres, significantly reducing working time. The integrated pressure gauge not only controls the pressure accurately, but also ensures optimal fit, improving the overall performance of the machine. Its robust and versatile design allows working with a wide range of tyres and rims, making this model an indispensable tool for any workshop looking for agility, reliability and speed.

54582

## DIGITAL WHEEL BALANCER

Safety and durability

This machine incorporates cutting-edge digital technology that optimizes the wheel balancing process, significantly improving vehicle performance.

Thanks to its integrated high-speed system, it is able to process data very quickly, providing immediate and accurate results. It also has multiple quick access configurations, allowing for a wide range of rims to be fitted, providing an accurate and efficient balancing service for various wheel types.

# 54565

## COOLANT FLUID EXCHANGE MACHINE

This machine has been specifically designed to facilitate repair and maintenance work on cars, ensuring efficient and fast operation.

N

Thanks to its innovative connection system, the change of coolant can be made in minutes. Its design intuitive allows quick and easy connection and disconnection, saving valuable minutes during hose reset operation.

In addition, this machine not only improves the speed of work but also increases accuracy as it contributes to the effective elimination of air bubbles present in the cooling system, ensuring smoother and more reliable engine operation.
